Displays and controls are not consistent and there is no time to study the manuals. The National Fire Alarm Code, Technical Correlating Committee established a task group to develop proposals

for a standard interface for the 2002 Code cycle. NIST's Building and Fire Research Laboratory established a cooperative research project through the National Electrical Manufacturers Association and the major fire alarm panel manufacturers to develop the technical basis for these proposals. This paper describes the work to date. A comprehensive training and reference manual used as a textbook in maritime institutions. Addresses the prevention, control, and extinguishing of fires aboard commercial vessels and on offshore drilling rigs. Includes chapters on emergency procedures and equipment as well as case studies of past shipboard fires. Generously illustrated with drawings, photos, diagrams, tables, and checklists. Recommended reading for all maritime personnel and kept both in shipboard reference libraries and in the offices of maritime executives. A revision of the highly popular guide to the design and installation of security and fire alarm systems in residential, commercial and industrial buildings. The book covers how-to methods for equipment selection, system design, cost estimating, system installation, and troubleshooting. Designed for quick reference and on-the-job use, it includes scores of diagrams, drawings and photographs to illustrate every design and installation procedure. The modern definition of firefighter no longer means " putting the wet stuff on the red stuff. " Emergency responders answer incidents ranging from fire alarm activations to elevator rescues and medical emergencies more often than full-blown fires. Consequently, responders increasingly interface with a

wide array of building systems. Underscoring the changing role of firefighters, *Fire Protection: Systems and Response* presents the basic knowledge of the inner workings of fire safety/fire protection systems and related equipment in buildings. The author provides a straightforward overview of the functions and benefits of these systems and how they can assist with fire suppression, code enforcement, alarm response, and elevator rescue. The book's comprehensive discussion of elevators, fire command centers, emergency generators and lighting, and HVAC systems sets it apart from other fire protection books currently available. The topics covered prepare emergency response personnel for the challenges they face working with fire protection systems, fire alarm systems, and elevators. Logically organized, clearly written, and covering all systems in a single text, this presentation of information streamlines fire service interaction with building features and fire protection systems. Providing an understanding of how systems are designed and installed, the book is also a reference for troubleshooting fire protection problems in the field. The information not only gives responders an appreciation/knowledge of how the systems work, but helps them use this knowledge to perform their job better.
